

PMaC: Performance Modeling and Characterization

The mission of the SDSC Performance Modeling and Characterization (PMaC) laboratory is to bring scientific rigor to the prediction and understanding of factors effecting the performance of current and projected HPC platforms.

PMaC is funded by the Department of Energy (SciDac [PERC](#) research grant), the Department of Defense (NAVO MSRC PET program), DARPA, and the National Science Foundation's STI (Strategic Technologies for the Internet) program. Allan Snively is on the steering committee of the HPC Users Forum.
